WA-Flex pipe couplings are used for connecting pipes. Both metal and plastic pipes can be connected quickly. The coupling allows pipe angulation, expansion and contraction. Flex couplings are used for water authority applications, civil engineering applications, piping contractors and marine piping. The units are available in sizes from 3/4" (21 mm) up to 157" diameter pipe (4000 mm). Pressure applications up to 16 bar, depending on the diameter of pipes to be connected. Stainless steel and high strength steel design range ensure significant weight savings are achieved as compared to cast iron couplings.

Data:
- Elastomer: EPDM & NBR (standard), VITON & SILOCONE (on request) 20 °C – 200 °C
- Media: Water, Gas, Petroleum, Helium
- Pipe material: Steel, Cast Iron, PE, PVC

Other Types available

Split Repair Clamps
Restraint Couplings
Couplings PVC Pipes
Couplings Steel to PVC
